HENRY PACHECO

Linux Systems & Backend Developer

Bucaramanga, Colombia (Open to Remote) | h3n.eth@gmail.com | +57 310 814 7959 | github.com/h3n-x | h3n-x.me | linkedin.com/in/h3n-x

SUMMARY

Linux systems and backend developer specializing in infrastructure hardening, security automation, and Python API development. Builds production-grade tooling for container runtime auditing, CI/CD secret scanning, and external attack surface management, consistently validated with 85-100% automated test coverage and industry-standard reporting formats (SARIF 2.1.0, CycloneDX SBOM, CVSS v3.1). Pursuing a Systems Engineering degree while actively deepening infrastructure security expertise.

TECHNICAL SKILLS

Linux & Systems: Arch Linux, Debian, systemd, nftables, SSH hardening, shell scripting (Bash), CLI tooling (grep, sed, awk, find)

Backend & APIs: Python 3.12, FastAPI (async/await), Pydantic v2, SQLAlchemy, REST API design, PostgreSQL, MySQL

Security & Compliance: CIS Docker Benchmark v1.6.0, SARIF 2.1.0, CycloneDX 1.5 SBOM, CVSS v3.1, OWASP Top 10, Anti-SSRF mitigation, TLS/SSL inspection

DevOps & Tooling: Docker, Docker Compose, Git, GitHub Actions (CI/CD), Pytest, Mypy, Ruff

Cryptography: WebCrypto API (AES-256-GCM), ECDH P-256, HKDF

Java (Training): Java, Spring Boot 3 (REST APIs), JPA/Hibernate, JDBC, Servlets (Oracle ONE coursework)

EXPERIENCE

Independent Systems & Backend Developer — *2023 – Present*

Remote — Colombia

- Engineered ArchForge, a modular Bash automation toolkit with 28 independent hardening modules (firewall, systemd, DNS, kernel hardening) for Arch Linux, cutting manual post-install configuration from hours to a single guided run; built dry-run mode and automated backup/restore to make every change reversible.
- Built Repo Secret Auditor, a Python/FastAPI CI/CD security scanner that detects leaked credentials via Gitleaks-compatible TOML rules and full Git history analysis, reaching 91% test coverage across 74 automated tests and exporting SARIF 2.1.0 and CycloneDX 1.5 SBOM reports for GitHub Code Scanning.
- Developed DockerWard, a runtime container security auditor that evaluates live Docker Engine API state against the CIS Docker Benchmark v1.6.0 (privileged mode, capability bounding sets, seccomp filters, cgroup limits), achieving 100% rule coverage across 71 automated tests with zero dependency CVEs.
- Architected SecuScan API, an async FastAPI backend for External Attack Surface Management performing TLS/SSL inspection, DNS security auditing (SPF/DMARC/DKIM), and anti-SSRF-hardened port scanning, passing 86/86 tests and generating a 0-100 security posture score.
- Implemented an end-to-end encrypted ephemeral messaging platform using WebCrypto AES-256-GCM and ECDH P-256/HKDF key exchange with zero server-side persistence, validated by 40 automated Pytest/Vitest test suites.

Open Source Contributor — *2022 – Present*

- Maintain public repositories with semantic versioning, GitHub Actions CI/CD pipelines, and structured technical documentation across 6+ active projects.

EDUCATION & CERTIFICATIONS

Systems Engineering (In Progress)
Universidad de Investigación y Desarrollo (UDI) — Bucaramanga, Colombia. Coursework: algorithms, computer architecture, computer networks, operating systems.

Google Cybersecurity Professional Certificate — *2024*
Google, via Coursera — 9 courses, 132 hours: network security, Linux and SQL, Python security automation, risk management, threat detection and response.

Linux Environment Hardening & Customization — *2023*
Hack4U (Savitar) — advanced tuning and securing of Unix-based workstations.

Oracle Next Education — Backend Specialization — *2023*
Oracle & Alura Latam — 343-hour program: Java, Spring Boot 3 REST APIs, JPA/Hibernate, MySQL, Git/GitHub, agile methodologies.

Talento Tech Bootcamp — Programming (Basic Level) — *2024*
Colombian Ministry of ICT (MinTIC) and Universidad Tecnológica de Bolívar — 159-hour introductory programming bootcamp.
